## **RSA 2022 – It's Live and CyberRes Will Be There!**

CyberRes will be in the north hall, booth 4520 as RSA comes back LIVE, ready to discuss our entire CyberRes portfolio of products on the show floor. For a deeper dive, ask your rep to schedule some time with our experts in the CyberRes meeting center. We'll be highlighting Galaxy, our immersive cyber research threat platform, with hourly demos in the booth. Don't miss it!

## NetIQ Privileged Account Manager popular use cases

NetIQ Privileged Account Manager can help your zero trust strategy. Check out this new video where we demo these popular use cases: 1) Privileged elevated access, 2) Risk service, 3) Credential access, and 4) Reporting/Auditing. [Watch now >](#)

## **Fortify on Demand (FoD) SAST – An Introduction for Developers**

This course follows the application development workflow for a DevOps team to address issues discovered by Fortify. It helps the user run FoD to include security early in the SDLC. The focus is on providing simple steps to run and analyze Fortify scans in FoD and showcasing the ease of use for scanning statically. The course includes Chatbots to help you get answers to questions and more.

[Register now >](#)

---

## **Fortify SAST Integration with Azure**

This course gives you multiple ways to include Fortify into your Azure DevOps to create an efficient DevSecOps that runs Static Application Security Testing (SAST) along with your application development. You can choose to work through all of the different options in this course that are available for Azure and Fortify to get a full understanding of both products; or you can choose a specific topic on 'how to' scan your source code according to your preference.

---

## **Fortify DAST Integration with Azure**

This course helps you configure and run Dynamic Fortify scans in your Azure DevOps to include security early in your development lifecycle. Learn the steps for running Fortify WebInspect and ScanCentral DAST through Azure. The course showcases the ease of use for creating Azure pipelines for Dynamic Application Security Testing (DAST).

### Addressing Your Governance Gaps (Part 2 of 3)

Kent Purdy's latest blog outlines how to effectively apply "least privilege" processes. For your access governance solution to be effective, it needs the flexibility to protect all of your sensitive resources. [Learn more >](#)

## Spring4shell: Another reminder of the importance of understanding what's in your software supply chain

Discussions have recently began circulating about a new remote code execution flaw that affects Spring Framework. This vulnerability, which many are now calling “Spring4Shell” in the community, is a previously unknown security vulnerability which has been assigned CVE-2022-22965. The “Spring4Shell” vulnerability affects the Spring Boot and Spring Framework artifacts, a popular framework used widely in Java applications. Read this blog post to learn about the best practices you need to accelerate or quickly adopt if they aren't currently in place. [Learn more >](#)

## Fortify Education – “What's available for our customers” Insight Recording

In this Insight session, we introduce you to the Fortify education team. We look at the Learning Management System SABA, review the Fortify security training offerings, and explore agile learning, including our Trial of the use of Chatbots. [Learn more >](#)

## New to the Community: How to add a signature to the end of your Community posts

CyberRes Community Users – Thank you for your contributions to the CyberRes Community! We wanted to let you know that you can now add a signature that will appear at the end of your posts. Learn how here. (Remember, you must be logged in to see instructions.) [Learn more >](#)
